## BRIDGESMEs Project

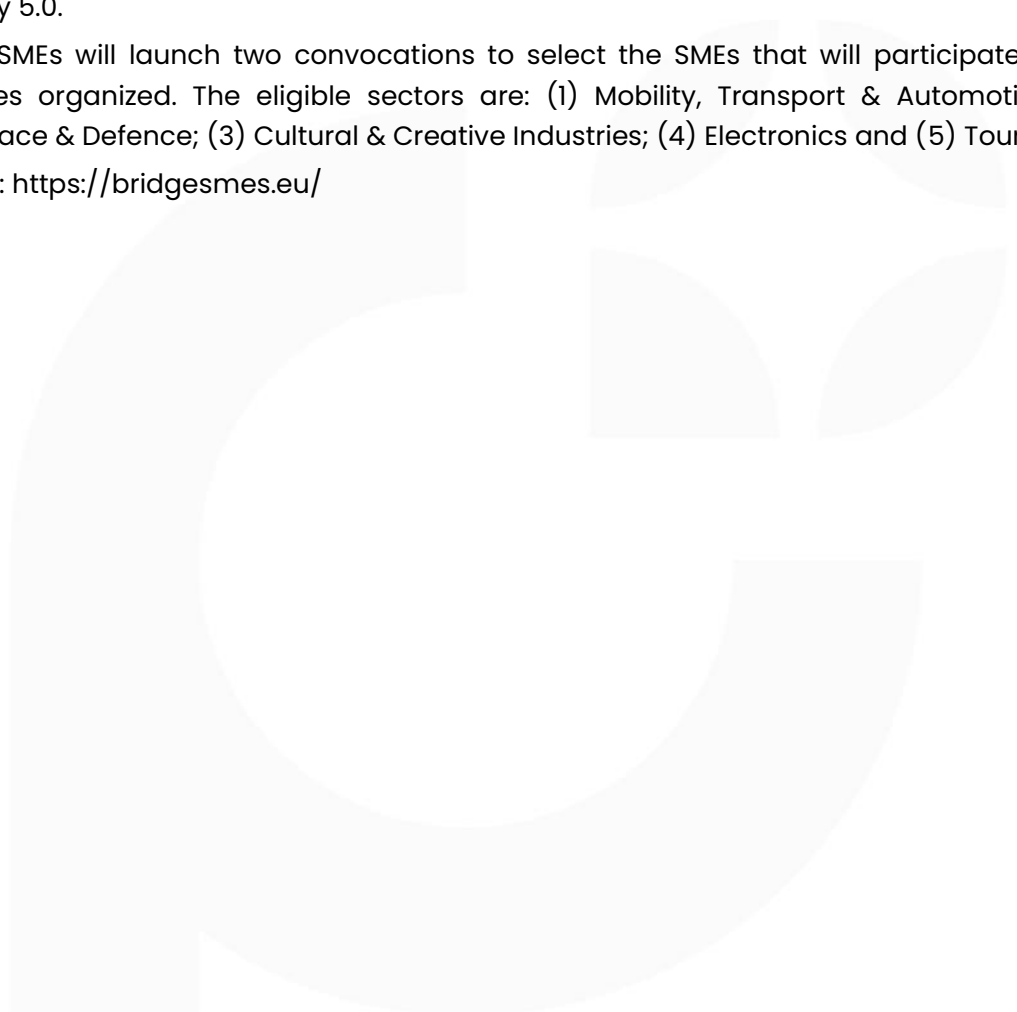

Project “Boosting resilience in five industrial ecosystems through adoption and deployment of advanced technologies among SMEs” (BRIDGESMEs) is a project funded by the European Commission under the Horizon Europe programme.

The project aims to support SMEs from five different ecosystems to facilitate and build alliances between pilot and tech-savvy companies, helping them to re-think their business models and operations in order to become more resilient, sustainable and human-centric.

The goal of the project is to identify needs, disruptions, challenges, and opportunities related to technology adoption and help these five industrial ecosystems transition towards Industry 5.0.

BRIDGESMEs will launch two convocations to select the SMEs that will participate in the activities organized. The eligible sectors are: (1) Mobility, Transport & Automotive; (2) Aerospace & Defence; (3) Cultural & Creative Industries; (4) Electronics and (5) Tourism.
