Piloting the Shift to Human Based Industry: SEISMEC

SEISMEC (Supporting European Industry Success Maximisation through Empowerment Centred development) embraces post-pandemic digitalisation changes and focuses on empowering workers by combining new technologies with human practices in Industry 5.0.

Aims for this project is empowering skilled workforces with human-centric solutions, addressing challenges tied to advanced workplace technologies, and fostering innovation through evidence-based recommendations.

By conducting multiple pilots across all industrial ecosystems identified within the European Single Market, including a cross-cutting platform-based pilot, SEISMEC wants to develop and demonstrate the concept of human centricity in diverse industry sectors and contexts, enhancing the human centricity pillar of the Industry 5.0 framework.
