## Towards Industry 5.0: The Community of Interest 5.0

The I5.0 Community of Interest was established by the PROSPECTS 5.0 project with the following objectives:

- To share knowledge on existing Industry 5.0 practices and identify current gaps.
- To provide access to ongoing research on Industry 5.0, including drivers, benefits, and challenges.
- To contribute to the development of an Industry 5.0 assessment framework for organizations.
- To participate in and enrich the WIKI 5.0 repository.
- To draw inspiration from Industry 5.0 practices across diverse industrial sectors.

This community brings together a wide range of European stakeholders, including companies sharing case studies, Digital Innovation Hubs (DIH and EDIH), EU working groups focused on Industry 5.0, industry associations, universities, research centres.

Members of the Community are involved from time to time, ensuring matching between the activities/events and their main interests (as selected by them at the registration stage).
